

Before you publish or send the PDF.

For HOA and condo document handoffs. One approved reference, a copy you retrieve, and a recorded human decision.

-
- ☐ **01 Identify the approved reference**
Confirm with the responsible person which PDF is approved. Keep that exact file as your reference; a filename alone is not approval.
 - ☐ **02 Retrieve the destination copy manually**
Download the PDF from the portal, website or print/mail partner yourself. Note where and when you retrieved it. Board Editions does not connect to or verify that destination.
 - ☐ **03 Compare the selected files**
Choose the approved PDF and retrieved copy in the free checker. Exact copy means identical selected file bytes, even if the names differ.
 - ☐ **04 Inspect and resolve differences**
Different file means different bytes. Content, metadata or export settings can cause this. Open both PDFs, review relevant content and resolve the difference with the responsible person.
 - ☐ **05 Record the human decision**
Mark your review and save the JSON check record before leaving. Keep approval or follow-up in your existing team process; the tool does not approve the document.
-

What this does not check

Content correctness, legal sufficiency, portal access, physical print or delivery. An exact match proves selected-file byte identity; it does not establish approval or what residents received.
